Re: School 28 Khalil Gibran Fuel Tank Replacement

Jennifer;

Eisenbach & Ruhnke Engineering, P.C. is pleased to provide the following proposal for design of the tank remediation and replacement at Khalil Gibran School (School 28).

The work would occur in the three parts.

The fuel tank was installed in 1951 and failing tightness testing recently. The piping from the tank to the boiler room is original. The oil pump set is older, but the vintage is not known.

The scope is to design the replacement of the tank and the piping to the pump set. The oil pump set design would be included if needed. The project would be submitted to SED. There would be some work with storm drainage and a planter and possibly with the ball field fence and edge of the ball field.

When the work is occurring, E&R would oversee the work.

The fee would be \$27,500. This includes site restoration. If E&R provided CM services, the cost would be additional.

The availability of the tank is being researched by Luzon.

If there are any questions, let me know.
