

2021 Summer Program Proposal

Computer Adventures is dedicated to providing children access to technology education in a safe, fun and confidence building environment. Children have so much fun with our project-based curriculum that they do not realize that they are learning. In addition to teaching technical skills, we also teach analytical thinking, encourage collaboration and creativity. We partner with school districts, schools, parents, recreation centers, various organizations and businesses, to provide technology enrichment classes online, in-person or hybrid. We will accommodate your schedule, venue and customize the course material.

PROPOSAL
